

GRID-HERCULES™ Chest-Rig Solutions

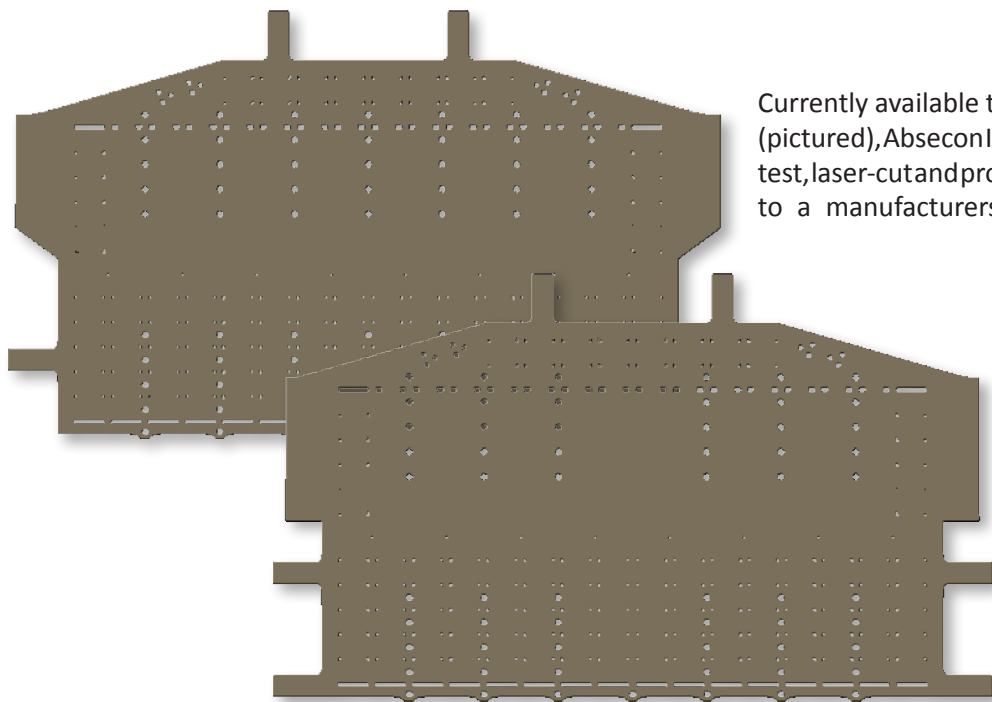

Global Textile Supplier Absecon Industries Introduces Manufacturing Support Services to Body Armor and Tactical Gear Manufacturers for Military Chest-Rigs Made with GRID-HERCULES™ Engineered Material.

Cologne, NJ, January 10, 2014

As the legend of GRID-HERCULES™ extends beyond laser-cut tactical body armor and military backpacks, Absecon Industries now offers bulk, laser-cut chest-rig components to tactical equipment manufacturers worldwide. While more-and-more military equipment manufacturers learn about the unequalled strength and durability of GRID-HERCULES™ engineered material, persistent requests for military chest rigs inspired Absecon Industries to make available these new products beginning February 2014.

Currently available to all manufacturers in five (5) “stock” designs (pictured), Absecon Industries can/will also custom design, engineer, test, laser-cut and promptly deliver exclusive chest-rig configurations to a manufacturers exacting specifications and requirements.

Absecon understands the sensitive nature of the design, research, and development process and only work with manufacturers in a strict, confidential manner. We are a collaborative partner focused on delivering innovative materials and fresh ideas to your talented team. Absecon stands ready to assist/participate as a designer/supplier of GRID-HERCULES™ engineered material in the various military and law enforcement armor programs of the future.

For more information on how to purchase GRID-HERCULES™ engineered material, please contact:
