

DDM4V9LW

OVERVIEW

The DDM4v9 Lightweight, finished with Daniel Defense Tornado™ Cerakote, is designed to satisfy the needs of modern shooters, not only in popular shooting sports, but also for tactical and defensive applications. The long, 15" DDM4 quad rail over a 16" cold hammer forged Lightweight profile barrel gives the operator the option to have the support hand extended out close to the muzzle allowing them to drive the gun more precisely, and preventing over-travel when transitioning between multiple targets. This, combined with our mid-length gas system which is known to have a smoother recoil impulse, allows for quick, but precise rapid fire. This rifle also comes with the newly designed, rugged and comfortable Daniel Defense Buttstock and Pistol Grip.
