

TBH-II MC

Tacticle Ballistic Helmet Mission Configurable

Affordable Ballistic Protection System and Mission Compatibility

Gentex, a world leader in the design and manufacture of head borne systems, has developed the Mission Configurable (MC) version of the combat proven Tactical Ballistic Helmet (TBH)-II. The Advanced Combat Helmet (ACH) based TBH-II MC platform is capable of integrating a broad range of organic and third party system components that enhance survivability and increase situational awareness. Ops-Core's Skeleton Shroud and ARC Rails provide the foundation for true system level performance, while the Ops-Core retention and suspension systems deliver immediate improvement in overall stability and comfort. The end result is an affordable ACH-based variant of Ops-Core's broadly adopted FAST helmet line used by the Special Forces world-wide. The TBH-II MC is the only authentic ACH-based helmet that combines genuine Ops-Core components.

The Gentex TBH-II MC family of helmets are NTOA approved for law enforcement and conform to the performance requirements of U.S. Army specifications PS-0428, including the NIJ IIIA 9mm FMJ protocol.

TBH-HST II
(High Side Trim)

TBH-II-HC
(Headset Configured, Mid-Trim)

TBH-II
(Standard, U.S. Army)

KEY FEATURES

Battle Tested Design

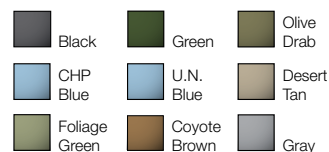

Gentex TBH-II Helmets use the U.S. Army approved Advanced Combat Helmet (ACH) molded shells and Ops-Core components.

Multiple Configurations

A highly versatile design allows for many configuration possibilities. ACH molded shells come available in three side trims: TBH-II Standard (U.S. Army), TBH-II HC (Headset Configured, Mid-Trim), TBH-II HST (High Side Trim). Option to have pre-drilled Night Vision Goggle (NVG) holes (one or three). Available in four sizes: Small, Medium, Large, and Extra-Large.

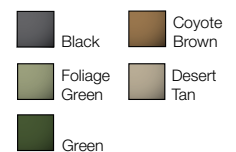

Numerous Color Options

TBH-II:

(Metallic Blue and Fast Tan also available)

Retention Systems:
