

**FIGHTING CLEARING STANDING RECONNAISSANCE  
WEBBING SYSTEM**

Our new belt order was designed to allow any operator to carry out the four types of patrolling. This is why we called it FCSR: *Fighting, Clearing, Standing and Reconnaissance*. The patented belt integration system combines everything from past and present that makes a good webbing belt order.

FCSR pouches are all constructed from quality military specification materials. All materials are treated for being rot proof, as well as being resistant to UV, Infrared and fire. Each utility pouch is PVC lined and comes with storm hoods and drainage holes.

Current available pouches include:

- LMG/A2 commanders pouches
- Standard utility pouches
- Butt pouch
- Dump bag
- MBITR pouch
- Bayonet frog
- Rip away medics pouches
- Side arm holsters
- Various magazine pouches including AK, 7.62mm link and 5.56mm link

FCSR allows the operator to build a better belt order system than ever before. Comfort and stability are key features to FCSR, achieved by the ability to attach pouches to a belt and the adjacent pouches.

The back of the pouch is designed to fit any standard 45mm/50mm belt. They are secured using an envelope fashion, where the envelope also becomes the hip-pad. This means that each pouch is an individual piece and if at any point the belt order becomes damaged, it can be replaced without stripping the whole system down.

This is unlike most other belt orders or even fixed pouch systems. This design can also accommodate ballistic protection into the hip pad to form a blast belt. This design was to enable the end user full customisation of the pouches they use and allowed for rapid replacement if needed.

FCSR allows for the pouches to be positioned closer together if more belt space is required, making it truly flexible. Each pouch joins side-by-side using a MOLLE strip, which keeps the shape of the belt kit around the operator's body. This also stops unwanted movement during dynamic action.

The pouches are attached to the belt with a padded section that tucks inside an envelope on the back of the pouch to create a secure but comfortable double-padded hip pad.
