

## WARRIOR RECON PLATE CARRIER (RPC)

Strong velcro and vertical ITW clips hold the MOLLE front panel securely in place.

The front panel of MOLLE can be completely removed and replaced with other panels

RPC plate carrier shown as a MK1 combo with the Pathfinder Chest Rig (PCR)

### Recon Plate Carrier W-EO-RPC

The RPC is the latest evolution of plate carriers from Warrior Assault Systems. Designed to be a lightweight and versatile low profile armour carrier, offering enhanced mobility without compromising protection.

The PCR has been developed to hold medium and large SAPI and ESAPI stand alone plates and the most common 10" x 12" I.C.W. plates available. Plate pockets have been backed with 3D mesh for added ballistic performance, comfort and dispersal of body heat. The Recon Plate Carrier comes standard with ladder style cummerbunds that attach to the RPCs front via 2 removable ITW SR Clips. This allows rapid access when getting in and out of the RPC (ITW SR Clips have a combined breaking strength of 600lbs per side). The RPCs shoulders can be worn in 3 different configurations as a slick low profile with the addition of velcro padded shoulders and wrap around sleeve for hydration and comms channeling.

The RPC comes as standard with a removable MOLLE front flap held in place by 2 vertical SQM clips and strong velcro which allows the panel to be removed and replaced with a wide variety of preconfigured weapon-specific pouch panels and Warrior's new Pathfinder Chest Rig. The RPC integrates with Warrior's new Back Panel

Made from Genuine US Mil Spec Materials and Hardware.
