

# The LockDown XP

*Deters unauthorized access to underground infrastructure*

## Security for Manholes

- The device prevents unauthorized entry to underground vaults and critical infrastructure

## For use in

- Telecommunication facilities
- Military Installations
- Airports
- Universities
- Laboratory Research Facilities
- Gas & Electric Utilities
- Municipalities
- Parking facilities
- Highways

## Advantages

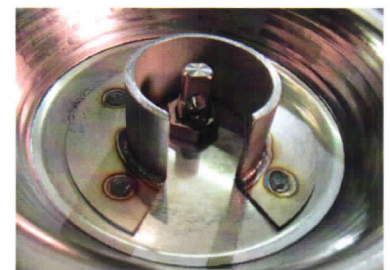

- Simple operation, no springs or moving mechanical parts
- Corrosion and tamper resistant
- 12 Gauge Stainless steel construction
- Remote access detection and reporting can be installed for added security

## Easy to Install

- Less than 40 pounds
- One-person installation in just a few minutes
- No special tools required
- No modification of manhole or lid required
- Can be easily and completely removed for unobstructed access to the manhole

## Puck Lock

We specify a proprietary stainless steel puck lock body that comes standard with the Van Lock removable core lock. Its flat face design with hardened steel deters drills, dent-pullers, and picking devices while the unique key helps prevent unauthorized duplication. An Abloy lock core is optional.

**Made in the U.S.A.**
